EDUCATION

Kashi Institute of Technology
Computer Science B.tech
CGPA: 7.56

Varanasi
2021 - 2025

EXPERIENCE

Banaras Locomotive Works (BLW) | Summer Intern

Varanasi | July 2024 - August 2024

- Developed the user-friendly frontend interface of an SMS Gateway application using React.js, focusing on responsive design and smooth user interactions.
- Ensured component reusability and maintained clean, modular code using modern React practices such as hooks and functional components.

Elgoss | Software Developer

Varanasi | February 2025 - April 2025

- Built a Visitor Data Management web application using Python and Flask, enabling secure storage and retrieval of visitor information.
- Implemented Aadhaar and PAN card scanning features using OCR for identity verification. Designed RESTful routes, integrated MongoDB for backend storage, and ensured data integrity with form validations and session management.

SKILLS

Programming Languages: HTML, CSS, C++, JavaScript
Libraries/Frameworks: React.js, Node.js, Express.js, Tailwind CSS
Tools / Platforms: VS Code, Git & GitHub, Postman, MongoDB Compass
Databases: SQL, MongoDB

PROJECTS / OPEN-SOURCE

Voting App (Backend) | Link

Node.js, Express.js and MongoDB

- Engineered the backend of a scalable Voting Application using Node.js, Express.js, and MongoDB.
- Designed and implemented secure RESTful APIs for vote casting, user authentication, and result retrieval. Emphasized data integrity, middleware-based validation, and efficient database schema design to ensure reliable and tamper-proof operations throughout the voting process.

To-Do App (Voice command) | Link

HTML, CSS, JavaScript, Web Speech API (SpeechRecognition)

- Developed a voice-enabled To-Do List application using HTML, CSS, and JavaScript that allows users to add and manage tasks through speech recognition.
- Implemented DOM manipulation for real-time task updates, enhancing accessibility and user experience.

CarZ-Paradise (Website for car enthusiasts) | Link

HTML, CSS, JavaScript and GSAP

- Designed and developed a visually engaging, animated landing page for a car service shop using HTML, CSS, JavaScript, and GSAP.
- Implemented smooth scroll-based animations, a custom interactive cursor, and dynamic sections showcasing car modifications, servicing, and tuning. Focused on creating an intuitive and responsive user experience with attention to modern UI/UX principles.
